Vale's Goro produces its first nickel metal

Vale announces that the Goro project, located in New Caledonia in the South Pacific, has successfully produced its first nickel metal product.

Commissioning at the Goro plant is now almost complete. Remaining commissioning work will continue to take place over the next few months with the refinery expected to be in production by the end of this year.

Goro is a nickel laterite project with an estimated annual nominal capacity to produce 58,000 metric tons of nickel and 4,000 metric tons of cobalt as a by-product.
