Action Plan Status Update: Copper Cliff Smelter Site-Specific Standard Approvals for Nickel, # 501-21-rv0

Context

On December 23, 2021, the Ministry of Environment, Conservation and Parks (MECP) issued the Site-Specific Standard (SSS) approval for nickel for Vale's Copper Cliff Smelter operations.

The table below shows the written summary of action plan items in 501-21-rv0, under section 3.3.

| Category | Action | Proposed Completion Time | Comments, Initiatives, Change |
|----------------------|---|--------------------------------|--|
| Material Handling | Material Handling Relocation Project | 2024 | FEL3 work completed. Construction request for proposals were evaluated. Additional work for the material handling building is being done by the project group to ensure the work is within budget. |
| Roads | Determine the impact of actual measures and the need for additional track- out control stations. | 2025 | Work not started. |
| Roads | Design and install additional track-out control stations if need is determined. | 2027 | Work not started. |
| Roads | Reassess and optimize the road vacuuming, watering and surfactant application schedule based on the impact of actual measures and the need for additional track-out control stations. | 2025 | Road conditions evaluated during Road dust sampling campaigns and during annual ESDM compilation. Work for assessment for additional measures has not started. |
| Roads | If additional track-out control is required and implemented in 2027, | 2028 | Waiting for investigation work to be completed. |

| Category | Action | Proposed Completion Time | Comments, Initiatives, Change |
|---------------------------|---|--------------------------------|---|
| | conduct road dust sampling campaigns in 2028, and reassess and optimize the road vacuuming, watering and surfactant application schedule. | | |
| Roads | Submit a Scope of Work and Cost Effectiveness Study for options to reduce the truck traffic on the on the Balsam Street access road to the Smelter (P01 to P05), considering at least the following options: I Route deliveries of final products, flux (quartz/sand) and Nickel Refinery mixed reverts and slag, down Godfrey Road (off RR35) and into the Smelter property via a new paved road I Rail deliveries of final products, flux (quartz/sand) and Nickel Refinery mixed reverts and slag | 2026 | Work not started. |
| General | Continue implementing the Best Management Practices Plan for Control of Fugitive Dust Emissions" including evaluating opportunities to relocate stockpiles and outside work and to adjust traffic patterns away from sensitive areas. | On going | Work on going to control fugitive emissions. |
| Work Room Improvements | Conduct an annual evaluation of potential workroom improvement initiatives and implement select initiatives as appropriate – targeting the Filter Plant, Furnace Building (M-Floor), Casting and Crushing | 2023 | Workroom projects or capital projects that could have an impact on workroom have started to be collected for the sites. |

| Category | Action | Proposed Completion Time | Comments, Initiatives, Change |
|---------------------------|---|--------------------------------|--|
| | Building and the FBR Building. | | |
| Work Room Improvements | Submit a report documenting the initiatives considered, the potential effectiveness of each initiative, how the initiative would be implemented, and justification for selected actions to be implemented in the following year. In subsequent years, similar reports must be submitted no later than December 31, however they must also include a summary of the work successfully implemented in the previous year. | 2024- On going | Based on investigation for work room improvements – has not started. |
| Housekeeping Protocol | Create a standardized, formal "Housekeeping Protocol for Nickel Emissions to the Environment" (Housekeeping Protocol), with documentation requirements and triggers for action within specific timeframes – to be implemented at the Filter Plant, Furnace Building, Converter Aisle, Copper Circuit, Casting and Crushing, Matte Separation and FBR Building. | 2023 | Housekeeping protocols from operating areas are being collected and formalized for December 31, 2023 |
| Housekeeping Protocol | Begin implementing the Housekeeping Protocol and if any changes occur update the protocol by the end of that year. | 2024-on going | Formalization not completed. |
| Baghouse Protocol | Create a standardized, formal "Baghouse and Dust Collection Systems Protocol for Nickel Emissions to the Environment" (Baghouse Protocol), | 2023 | Baghouse Program is being finalized with formal protocol with sites being developed. |

| Category | Action | Proposed Completion Time | Comments, Initiatives, Change |
|----------------------|---|--------------------------------|---|
| | with documentation requirements and triggers for action within specific timeframes, to be implemented for the following baghouse dust collection systems: · CRF Building: Material Handling Dust Collector #1 and General Building Dust Collector #2 · Filter Plant: Gallery Dust Collector, Diverter Area Dust Collector and Workroom Baghouse · Area 10 Building: Area 10 Baghouse · Furnace Building: No. 1 Dust Collector, No. 2 Dust Collector and M-Floor Baghouse · Converter Aisle: Sandfloor Baghouse · Copper Circuit: MK Dust Collector · Casting and Crushing: Crusher Baghouse #1/#3 (two baghouses exhausting out a common stack) · Matte Separation: AB Baghouse * FBR Building: Baghouse #1, Baghouse #2, Baghouse #3, Baghouse #4/5, Baghouse #3, Baghouse #4/5, Baghouse #7, Baghouse #8 and Baghouse #9 · Secondary Baghouse (exhausting out the 450' SBH/FBR Stack) · Fluid Bed Dryer Baghouses (exhausting out the 450' FBD/FF Stack) | | |
| Baghouse Protocol | Begin implementing the Baghouse Protocol and if there are any updates to the Baghouse | 2024-on going | Work on baghouse protocols needs to be completed first. |
| | Protocol in a given year, the updated Baghouse | | |

| Category | Action | Proposed Completion Time | Comments, Initiatives, Change |
|-------------------------------|---|--------------------------------|-------------------------------|
| | Protocol must be submitted no later than December 31 of that year. | | |
| Dust Collection Systems | Conduct an assessment of the overall dust collection system for each building to ensure the dust collection systems are collecting emissions at the appropriate locations and in the appropriate amounts. The report shall: • describe the existing dust collection system(s) for each building including deficiencies and recommended improvements • include a proposal to ensure the Filter Plant Venturi Scrubber discharges dust to the environment at less than 2mg/m ³ . | 2024-2026 | Work not started. |
| Dust Collection Systems | Incorporate the results/recommendations into the annual evaluation of workroom improvement initiatives. | 2025 | Work not started. |
| Dust Collection Systems | Conduct workroom sampling campaigns and conduct dispersion modelling to determine the impact of recent emissions reduction initiatives. The results of this assessment will determine if another assessment of the overall dust collection system is required, on a building-by-building basis. | 2027-2028 | Work not started. |
| Dust Collection Systems | If another assessment of the overall dust collection system is required, submit a summary report describing the existing dust collection system(s) for each building requiring additional | 2030-2031 | Work not started. |

| Category | Action | Proposed Completion Time | Comments, Initiatives, Change |
|--------------------|---|--|--|
| | assessment, including deficiencies and recommended improvements and incorporate the recommendations into the annual evaluation of workroom improvement initiatives. | | |
| Additional Work | Conditional on future workroom conditions, close 6 sidewall vents and 3 roof vents at the FBR building for 6 months per year (weather dependent, generally November to April) | 2022, Moved to December 2023 for evaluation | The vents were checked in December 2022 and January 2023. All 3 roof vents were closed. Not all sidewall vents were observed closed. Work will need to be done to improve workroom conditions prior to closure of the 6 sidewall vents. |
| Additional Work | Continue previous Action Plan items related to "Additional Work": -Characterizing emissions and measuring the results and effectiveness of control projects -Operating a community particulate monitoring network -Reviewing and updating the environmental training as required -Annual community engagement meetings with the Environmental Monitoring Team | On going | On April 1 st , 2019, Vale took over the operation, maintenance and reporting of results from its particulate monitoring network of 9 stations in accordance with the requirements of the Operations Manual for Air Quality Monitoring in Ontario. Quarterly reports are sent to the Ministry. Graphical summaries of the monitoring results and the quarterly reports are posted on Vale's internet website, <u>http://www.vale.com/canada/EN/aboutvale/c</u> <u>ommunities/sudbury/sudbury-</u> <u>environment/environmental-reporting-</u> <u>sudbury/air-quality-monitoring-</u> <u>results/Pages/default.aspx</u> Community engagement meeting took place on March 28 th , 2023. Training of all personnel on Environmental Management System ISO14001. Included in training is environmental aspects which include emissions to air. |
